Comments:  
Santa Fe Mountains Landscape Resiliency Project

Dear People....

Please consider my input concerning the proposed implementation of the forest management plans discussed  
.... particularly in light of the alleged "computer glitch" which erased all previous public comments.

I strongly feel

A comprehensive environmental impact statement is required for a project of this scope and size that may have significant impacts on the human environment and on resources such as recreation, roadless areas and wildlife.

In addition I raise an objection which is generally ignored or dismissed as "not relevant" ( to the concerns of money and efficiency )...the unknown & uncalculated cost of killing living beings ...all the insects and animals and plants that are part of our own extended body ....to just simply refuse to acknowledge this is a sign of a deeply alienated mindset; the impacts of such a procedure obviously go far beyond a specific site and resonate with the entire ecology we are all a part of.

The above is a preface to a request and demand that the analysis of such a project must be "site-specific" in the legal lingo ....the "condition- based" approach is too general and vague to make meaningful sweeping decisions.

I urge you with all my heart to take my opinion into account as well as consider it in the perspective of the suspicion and bad will generated by the alleged "computer glitch" which erased all previous comment....

Sincerely & Respectfully
