Santa Fe Mountains Landscape Resiliency Project

Jun 26, 2019

Forest Supervisor James Melonas

Dear Forest Supervisor Melonas,

Thank you for the opportunity to comment on the Scoping Document for the Santa Fe Mountains Landscape Resiliency Project. I appreciate the Forest Service soliciting public comment on this project, and, as a native of New Mexico, I take a special interest in these issues.

1. An EA is inappropriate for a project of this scale and complexity that impacts many threatened and sensitive species, old growth forests, roadless areas and streams and riparian areas. Because this project will have significant impacts to these and other resources, a thorough, site-specific analysis of all environmental impacts in an Environmental Impact Statement is required.
2. The Forest Service should analyze a full range of alternatives to the agency's proposal, including the Santa Fe Conservation Alternative submitted by WildEarth Guardians and others.
3. The Forest Service should identify and implement the minimum road system on a landscape scale and employ a thoughtful, strategic approach to assuring public access while reducing negative impacts from forest roads to water quality and aquatic habitats, and improving watersheds and forest resiliency by returning expensive, deteriorating, and seldom-used forest roads to the wild.
4. The Forest Service should consider the best available science. The agency shouldn't overlook contrary, credible views and data.
5. Climate change intensifies the adverse impacts associated with tree thinning, prescribed burning, and roads. The Forest Service should consider the risks of increased disturbance when analyzing the proposed project, as part of the affected environment, and as part of the agency's hard look at impacts.
6. The Forest Service should analyze the cumulative impacts of the proposed project with all other past, present and foreseeable future projects within the broader landscape, including the Hyde Park and Pacheco Canyon projects, livestock grazing, and motorized use.

Sincerely,

James Donahue
