Your destructive "resiliency" plan

To whom it may concern:

You must know that forests-intact, healthy forests-are the most effective tool for sequestering carbon dioxide the planet has, a tool we all need desperately right now.

I know the Trump administration is squelching science at every turn, but I am still shocked that you can put the word "resiliency" in the title of the plan. Fake title, words mean what the powerful say they mean.

Nevertheless, I hope you are ashamed of yourselves for "only taking orders."

I cannot say how MUCH I oppose your planned slash and burn project at a time we need to be planting trees by the trillion.

You may think you are selling lumber. You are selling the future of our beautiful home.

Stop it.

Comments:

You hypocrites are promoting wreckage, not resiliency.

We need vast swaths of additional forests to sequester the CO2 humans foolishly keep pumping into the atmospheric sphere so you have the bright idea to eliminate 90% of the one we've got in Santa Fe?!?!?

I'm sure you've got a buyer, but after the government finishes pandering to profiteers and the planet is cindering itself, where are your children and grandchildren going to go to escape the hellhole you want to sell us into.

You can't be paid enough to do so much harm and call it resiliency. Take off the blinders. Grow a backbone. Stop fueling the problem.
