fires

I moved to Santa Fe 27 years ago on the advice of my doctors. I need clean, fresh, unpolluted air. I chose NM because I thought that would be what I would find here. I suffer from asthma, pulmonary fibrosis, multiple chemical sensitivity as well as a few other diseases. I started to get better here until all of this burning started. I have hardly been able to leave my house and my health is deteriorating. What purpose can be served by destroying our beautiful forests? The environmental impact is frightening as well as the health impact on all who live here. NM is no longer the land of enchantment. Do more research before you proceed with your plan to remove more trees. Please take into consideration the long lasting effect this will have on the population as well as our ecosystem. Thank you.
