Santa Fe Mountains Resiliency Landscape Project

Dear Public Officials:

Before going ahead with this project, it's absolutely necessary that a comprehensive environmental impact statement be done and this analysis must be site-specific.

I realize that your intentions are to prevent future forest fires by these burns. However, prescribed burns in the past have not only severely damaged new tree growth for generations, but these fires have frequently gotten out of control when unpredictable NM winds have arisen.

As an avid hiker and boater for years in NM, I sincerely plead with you not to damage our precious forests for years to come by these at-will prescribed burns, which will also harm wildlife.

Sincerely yours,

Bruce Warren
Albuquerque, NM
