Forest thinning

I have just become aware of your plan to destroy millions of trees and perform controlled burns in the SFNF. This is beyond appalling, given that the planting of trees is vital to help undo the human-caused elements contributing to climate change. Has an EIS been done? Is it site-specific? If so, where is that study available? Who will profit from this massive environmental destruction (e.g. what happens to the destroyed trees)? I find your planned actions to be unconscionable and self-serving.

Thank you

Laraine Ferguson
